

Flexyfuel – MVP User Stories

THEME 1: Onboarding & Authentication

US - 001 - Phone Number Registration

As a new user, I want to sign up using my phone number and verify it with an OTP, so that I can securely access Flexyfuel services.

Acceptance Criteria

1. The user enters a valid phone number.
2. The system sends an OTP to the phone number.
3. Users must input the correct OTP to proceed.
4. Successful verification creates a user account.
5. The user is redirected to profile setup.

Edge Cases

-  Invalid phone number → show “Enter a valid phone number.”
-  Incorrect OTP → show error and allow retry.
-  OTP expired → user must request a new OTP.

US - 002 - Login for Returning User

As a returning Flexyfuel user, I want to log in securely after not using the app for a while, so that I can continue ordering fuel or managing deliveries without creating a new account.

Acceptance Criteria

1. The system must allow users to log in using their registered phone number.
2. The system must send a one-time password (OTP) to the phone number entered.
3. The user must enter the correct OTP to complete login.
4. Upon successful login:
 - The system must restore the user’s existing account.
 - The user must be redirected to the correct dashboard based on role:
 - Consumer → Consumer home
 - Rider → Rider dashboard
5. The system must maintain an active login session across app opens.

Edge Cases

-  User enters an unregistered phone number → Show: “Account not found. Please sign up.”
-  OTP expires → Prompt user to request a new OTP.

US - 003 - Account Recovery

As a Flexyfuel user who is using a new device, I want a way to regain access to my account if I cannot log in, so that I can continue using Flexyfuel without creating a duplicate account.

Acceptance Criteria

1. The system should provide a “Having trouble logging in?” option on the login screen.
2. Users must be able to recover access using their registered phone number.
3. The system must send an OTP to the registered phone number.
4. Upon successful OTP verification:
 - The user must be logged into their existing account.
 - The user must be redirected to their role-based dashboard.
5. The system must clearly communicate success or failure at each step.

Edge Cases

- **!** User enters a phone number not linked to any account → Show: “This phone number is not registered.”
- **!** User attempts to use an expired OTP → Show: “OTP expired. Please request a new one.”
- **!** Network failure during OTP verification → Preserve state and allow retry.
- **!** User previously logged out manually → Require full OTP login again.

US - 004 - Role Selection During Onboarding

As a new user, I want to select my role (Consumer or Rider), so that I only see features relevant to me.

Acceptance Criteria

1. Users must select exactly one role.
2. Role determines dashboard and permissions.
3. Consumers gain immediate access.
4. Role selection is saved to the user profile.

Edge Cases

- **!** User skips role selection → pause continuation.
- **!** Rider attempts access before verification → show “Verification pending.”

US - 005 - Create Basic Profile

As a user, I want to complete my basic profile, so that my orders and deliveries are correctly linked to me.

Acceptance Criteria

1. Consumer: Name + Phone Number required.
2. All mandatory fields must be validated.
3. Profile must be saved before accessing the dashboard.

Edge Cases

- **!** Missing required field → highlight field and block save.

THEME 2: Fuel Ordering (Core MVP)

US - 006 - Order Placement

As a Consumer, I want to select fuel quantity and delivery location, so that fuel can be delivered to me.

Acceptance Criteria

1. The user selects fuel quantity (5L, 10L, 20L).
2. System auto-detects user location.
3. Estimated cost and ETA are displayed.
4. User confirms order.

Edge Cases

- **!** Location not detected → select location on the map required.

US - 007 - Select Delivery Mode

As a Consumer, I want to choose between Standard and Priority delivery, so that I can control timely delivery versus cost.

Acceptance Criteria

1. Delivery options displayed clearly.
2. Priority delivery shows a higher fee.
3. Changing mode updates ETA and total cost.
4. One delivery mode must be selected.

Edge Cases

- **!** User deselects all modes → block confirmation.

US - 008 - View Order Status

As a Consumer, I want to see my order status in real time, so that I know exactly where my delivery is.

Acceptance Criteria

1. Order statuses follow:
Pending → Rider Assigned → En Route → Arrived → Completed
2. Status visible at all times on the app.
3. Status updates instantly on change.

Edge Cases

- **!** App closed → status restores on relaunch.
- **!** Network delay → last known status shown.

US - 009 - Live Tracking

As a Consumer, I want to see my rider moving on the map, so that I can estimate arrival accurately.

Acceptance Criteria

1. Once a rider is assigned to an order, the system must display a **live map view** on the customer app.
2. The map must show:
 - The rider's current location
 - The customer's delivery location

3. The rider's location must update automatically at regular intervals without requiring the user to refresh.
4. The system must calculate and display an Estimated Time of Arrival (ETA) based on:
 - Rider movement
 - Distance remaining
5. The ETA must update dynamically as the rider progresses or encounters delays.
6. Live tracking must remain visible until the order reaches Completed status.

Edge Cases

- **!** GPS signal lost → show “Updating location...”
- **!** Rider stops moving for an extended period → Recalculate ETA and continue displaying updated estimate.
- **!** Consumer closes the app during tracking → Tracking must resume seamlessly when the app is reopened.
- **!** Poor network conditions → Show cached rider location with a clear indicator.

US - 010 - Delivery Confirmation

As a Consumer, I want delivery to be confirmed securely, so that I receive the correct fuel.

Acceptance Criteria

1. The system must generate a unique confirmation code for the order.
2. The rider must request this confirmation code from the customer before completing delivery.
3. The customer must provide the correct code verbally or visually.
4. The rider must input the confirmation code into the rider app.
5. Only after a valid code is entered:
6. The order status must change to Completed
 - The delivery must be recorded as successful
 - Both the rider and customer must receive a delivery completion confirmation.

Edge Cases

- **!** Rider enters an incorrect confirmation code → Block completion and prompt retry.
- **!** Customer is unavailable at delivery point → Rider must escalate the issue to Operations
- **!** Network failure during confirmation → Cache confirmation and sync once connectivity is restored.
- **!** Attempt to complete delivery without code → System must prevent completion.

THEME 3: Rider Dispatch & Mobility Operations

US - 011 - Rider Dashboard

As a Rider, I want a clear dashboard showing my assigned deliveries, so that I can understand what I need to deliver and act quickly.

Acceptance Criteria

1. The dashboard must display all active assigned orders.
2. Each order must show:

- a. Customer location
 - b. Fuel quantity
 - c. Delivery mode
 - d. Order status
3. The rider must be able to open navigation to the customer location.
4. A “Start Trip” button must be visible for each assigned order.
5. The dashboard must update automatically as orders are assigned or completed.

Edge Cases

-  Multiple assigned orders → Display orders by priority and assignment time.
-  Rider attempts to access dashboard while unverified → Show restriction message.

US - 012 - Start & Complete Delivery

As a Rider, I want to start and complete deliveries in the app, so that order status updates correctly.

Acceptance Criteria

1. When a rider taps **Start Trip**:
 - Order status must change to **En Route**
2. When the rider reaches the customer’s location:
 - The rider must mark arrival
 - Order status must change to **Arrived**
3. The rider must complete delivery only after:
 - Receiving the customer’s confirmation code
 - Entering the correct code into the app
4. Upon successful confirmation:
 - Order status must change to **Completed**
 - Delivery must be logged in rider history

Edge Cases

-  Rider attempts to complete delivery without starting trip → Block action.
-  Network loss during delivery flow → Cache actions and sync when online.

US - 013 - Basic Safety Logging

As a Rider, I want to mark my bike as ready or not ready, so that unsafe deliveries are prevented.

Acceptance Criteria

1. Riders must log bike readiness at the start of each day.
2. Bike status options must be:
 - Ready
 - Not Ready
3. If a rider marks Not Ready:
 - The system must block order assignment.
4. Bike readiness status must be visible to Operations.

- “Not Ready” blocks order assignment.

Edge Cases

-  Rider forgets to log → prompt required.
-  Marks not ready → admin notified.

THEME 4: Wallet & Payments

US - 014 - Wallet Top-Up

As a Consumer, I want to fund my wallet, so that I can pay for fuel orders easily.

Acceptance Criteria

1. The system must allow wallet top-up via:
 - Card payment
 - Bank transfer / USSD
2. The wallet balance must update automatically after successful payment.
3. The user must see a clear transaction confirmation.
4. Wallet balance must always be visible in the app.

Edge Cases

-  Payment fails or is declined → Wallet balance must remain unchanged.
-  Duplicate payment callback from provider → System must prevent double credit.
-  Network interruption during top-up → Transaction must be safely retried or resolved.

US - 015 - Pay for Fuel Order

As a Consumer, I want payment to be deducted automatically, so that my order can proceed without delays.

Acceptance Criteria

- Wallet or one-time payment supported.
- Payment confirmed before rider assignment.
- Receipt generated.

Edge Cases

-  Insufficient balance → prompt top-up.
-  Payment timeout → retry option.

THEME 5: Notifications & Communication

US - 016 - Order Notifications

As a user, I want to receive notifications on order updates, so that I stay informed without opening the app.

Acceptance Criteria

- Notifications sent for:
Order confirmed, Rider assigned, En route, Completed.
- Notifications sent instantly.

Edge Cases

-  Device offline → notification queued.
-  Push fails → in-app alert fallback.

US - 017 - Call Rider or Support

As a Consumer, I want to call my rider or support, so that I can resolve urgent issues quickly.

Acceptance Criteria

- Call buttons visible on the active order screen.
- Calls initiated using a phone dialer.

Edge Cases

-  Rider unavailable → redirect to support.

THEME 6: Admin / Operations Panel

US - 018 - Monitor Orders (Operations Dashboard)

As an Admin, I want to see all customer orders in real time from a centralized dashboard, so that I can monitor active deliveries, identify delays early, and intervene before customer experience is affected.

Acceptance Criteria

1. The system must provide a centralized Orders Dashboard accessible only to Admin users.
2. The dashboard must display all orders created within the system, regardless of status.
3. Each order must clearly show:
 - Order ID
 - Customer name or identifier
 - Fuel quantity
 - Delivery mode (Standard or Priority)
 - Current order status
 - Assigned rider (if any)
4. Order statuses must follow the defined lifecycle
 - Pending
 - Rider Assigned
 - En Route
 - Arrived
 - Completed
5. The dashboard must update automatically when an order changes status, without requiring a manual page refresh.

Edge Cases

- **!** Admin loses network connectivity → Freeze the last known state and show a connectivity warning.
- **!** Data delay → show last updated timestamp.

US - 019 - Assign & Reassign Riders to Orders

As an Admin, I want to assign or reassign riders to orders, so that fuel deliveries are completed on time even when issues occur.

Acceptance Criteria

1. The system must display a list of available riders.
2. Admins must be able to assign a rider to any order in Pending status.
3. When assigning a rider:
 - The selected rider must be notified immediately.
 - The order status must update to Rider Assigned.
4. The system should support proximity-based assignment, allowing Admins to see riders closest to the delivery location.
5. Admins must be able to reassign a rider if:
 - The rider reports an issue
 - The rider is delayed
 - The rider becomes unavailable
6. Reassigning a rider must:
 - Unassign the previous rider
 - Notify both the old and new riders
 - Preserve the order's delivery history

Edge Cases

- **!** Assigned rider goes offline before starting delivery → Automatically unassign rider and return order to Pending.
- **!** Multiple Admins attempt to assign riders to the same order simultaneously → First action succeeds; others see "Order already assigned."
- **!** No rider available → alert ops.

US - 020 - View Basic Operational Reports

As an Admin, I want to view daily operational metrics, so that I can quickly assess performance and identify trends or issues.

Acceptance Criteria

1. The system must provide a Daily Reports view accessible to Admin users.
2. Reports must display key metrics for a selected day:
 - Total number of orders created
 - Number of completed orders
 - Number of cancelled orders

3. Metrics must be calculated automatically based on system data.
4. The report view must clearly label the selected date.
5. Data must be presented in a simple, readable summary format suitable for quick review.

Edge Cases

- **!** No activity recorded for the selected day → Display all metrics as zero with message: “No operational data for this day.”
- **!** Partial data due to system downtime → Show warning: “Data may be incomplete.”
- **!** Admin selects a future date → Disable selection or show empty state.

THEME 7: Help & Support

US - 021 - Access Help & Support

As a Flexyfuel user (Consumer or Rider), I want easy access to help and support resources within the app, so that I can understand how the service works and get assistance when issues arise.

Acceptance Criteria

1. The app must provide a Help & Support section accessible from the main menu.
2. The Help section must include a Frequently Asked Questions (FAQ) area covering:
 - Fuel safety
 - Delivery process
 - Payments and wallet usage
3. The FAQ content must be readable without contacting support.
4. The system must provide a chat support option for real-time assistance (where available).
5. The system must also provide contact options:
 - Phone number
 - Support email
6. Contact details must be clearly visible and easy to access.

Edge Cases

- **!** User has no internet connection → Show cached FAQ content if available.
- **!** User repeatedly contacts support for the same issue → System may suggest relevant FAQ articles before initiating chat.
